PROJECTS

Prompt nation - [[View on GitHub](#)]

- Created a platform for prompt engineers to discover and share AI prompts using Next.js.
- Integrated OpenAI's ChatGpt for a chatbot for testing the prompts.
- Designed a clean and minimal user interface which helped improve the overall time spent by the user on the platform by up to 32%.
- Implemented a clean architecture which increased the efficiency by 28% and server response time by 16%.

Chit chat - [\[View on GitHub\]](#)

- Built a real-time messaging application where users can chat and share images in real time using React and Firebase.
- Used Firebase services for user authentication for improved user security.
- Implemented real-time features with Firebase real-time database which improved the overall response time by 14%.
- Created an elegant user interface for better user experience and navigation.

Notable - [[View on GitHub](#)]

- Crafted an Electron-based desktop application for note-taking and task management.
- Extensively used OOP's concepts for creating a file-system interface which reduced the time required for fetching the user files by 29%.
- Designed a user interface that helps users focus and improve their productivity.
